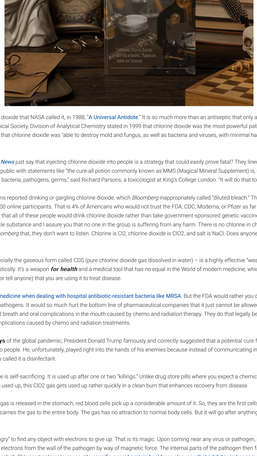
Chlorine Dioxide, the Universal Medicine

June 22, 2023 — Leave a Comment

By Dr. Mark Sircus



So universal is chlorine dioxide that NASA called it, in 1988, "**A Universal Antidote**." It is so much more than an antiseptic that only a full-blown idiot would call it bleach. The American Chemical Society, Division of Analytical Chemistry stated in 1999 that chlorine dioxide was the most powerful pathogen killer known to man. NASA knew way back when that chlorine dioxide was "able to destroy mold and fungus, as well as bacteria and viruses, with minimal harm to humans, animals, or plants."

So why did *Bloomberg News* just say that injecting chlorine dioxide into people is a strategy that could easily prove fatal? They lined up a few experts who find no problem in deceiving the public with statements like "the cure-all potion commonly known as MMS (Magical Mineral Supplement) is, in essence, industrial grade bleach." "It is designed to kill bacteria, pathogens, germs," said Richard Parsons, a toxicologist at King's College London. "It will do that to human tissue."

In 2020, 4% of Americans reported drinking or gargling chlorine dioxide, which *Bloomberg* inappropriately called "diluted bleach." This was according to a CDC poll conducted without about 500 online participants. That is 4% of Americans who would not trust the FDA, CDC, Moderna, or Pfizer as far as they can spit into a hurricane wind. I assure you that all of these people would drink chlorine dioxide rather than take government-sponsored genetic vaccines. I am in a group of 31,000 people using this near-miracle substance and I assure you that no one in the group is suffering from any harm. There is no chlorine in chlorine dioxide but don't bother telling the FDA or *Bloomberg* that, they don't want to listen. Chlorine is Cl2, chlorine dioxide is ClO2, and salt is NaCl. Does anyone on earth call salt "chlorine" because it has a Cl ion?

Chlorine dioxide – especially the gaseous form called CDS (pure chlorine dioxide gas dissolved in water) – is a highly effective "weapon" that the immune system welcomes enthusiastically. It's a weapon **for health** and a medical tool that has no equal in the World of modern medicine, which is perfectly legal to use if you don't say (or even think or tell anyone) that you are using it to treat disease.

However, it is a savior medicine when dealing with hospital antibiotic-resistant bacteria like MRSA. But the FDA would rather you die than use chlorine dioxide to clear your body of lethal pathogens. It would so much hurt the bottom line of pharmaceutical companies that it just cannot be allowed. But dentists use it to treat oral-cavity problems like bad breath and oral complications in the mouth caused by chemo and radiation therapy. They do that legally because bad breath is not a disease, and neither are complications caused by chemo and radiation treatments.

Back in the early days of the global pandemic, President Donald Trump famously and correctly suggested that a potential cure for COVID-19 could be injecting chlorine dioxide into people. He, unfortunately, played right into the hands of his enemies because instead of communicating in a clear way about what chlorine dioxide is, he simply called it a disinfectant.

Each ClO2 gas molecule is self-sacrificing. It is used up after one or two "killings." Unlike drug store pills where you expect a chemical or drug to compromise a hundred things before being used up, this ClO2 gas gets used up rather quickly in a clean burn that enhances recovery from disease.

As the chlorine dioxide gas is released in the stomach, red blood cells pick up a considerable amount of it. So, they are the first cells to benefit from chlorine dioxide. However, the blood carries the gas to the entire body. The gas has no attraction to normal body cells. But it will go after anything acidic including cancer cells.

Chlorine dioxide is "hungry" to find any object with electrons to give up. That is its magic. Upon coming near any virus or pathogen, it snaps into contact with the germ ripping four or five electrons from the wall of the pathogen by way of magnetic force. The internal parts of the pathogen then fall apart unprotected by their normally resistant outer shell. Chlorine treatments **cause site-specific capsid protein backbone cleavage that inhibits viral genome injection into the host cell**.

Chlorine Dioxide Rides to the Rescue in COVID-19-Related Medical Issues

Chlorine dioxide – that small, extremely safe medicine that the FDA would rather not exist – rides to the rescue of both COVID-19-infected patients and the billions of people who blindly took COVID-19 injections programmed to force human body cells to produce spike proteins, turning them into doomsday shots.

Chlorine dioxide works on **the central damaging aspect of COVID-19 vaccines, which is coagulation in the blood**. "Normally doctors prescribe an anticoagulant, such as warfarin, which is a substance equal to rat poison, which in the long term, will cause strokes, etc. So, it's not a solution at all. **However, chlorine dioxide is a solution because we have seen that it directly dissolves mini clots before they get bigger**," says Dr. Andreas Kalcker.

"Oxygen deprivation is the cause of death for most COVID-19 victims. Chlorine dioxide **floods the blood with oxygen**, immediately enriching the hemoglobin molecules of red blood cells and allowing patients to breathe again," continues Kalcker.

Notably, many sick and dying people have red blood cells clumping together and not moving freely. Severely clumped red blood cells (Rouleaux) affect proper oxygenation because the red blood cells do not circulate well enough to deliver oxygen where it is needed. Early in the pandemic, New York physicians noted that it seemed as if COVID-19 patients had been transported to 30,000 feet in altitude and were starving for oxygen. One video shows that **after taking chlorine dioxide, the red blood cells of an affected person regain proper size and shape, and once again move freely through the blood**.

Direct Attack on Red Blood Cells

The oxygen-saturation level of COVID-19 patients, especially those with severe cases, was prone to dropping to dangerous levels, even below 90%. Dr. Angelo D'Alessandro, Ph.D., an Assistant Professor and Director at the University of Colorado School of Medicine's Colorado Cancer Center at the Department of Biochemistry and Molecular Genetics, asked the questions, "Can it be due to the cell that transports oxygen? ... Can COVID attack red blood cells – the most abundant cells in the human body – which have evolved specifically to transport oxygen?"

The answer to both questions was "yes." [A] study revealed that SARS-CoV-2 damages the membranes of oxygen-carrying red blood cells. The virus didn't affect the cells' hemoglobin, which allows the cells to pick up oxygen, but it did damage membrane proteins responsible for blood-cell structure, a characteristic that allows these cells to indirectly regulate red cell capacity to release oxygen and, most importantly, to squeeze through narrow capillaries in the periphery of the bloodstream."

It is also important to note that chlorine dioxide prevents spike proteins from sticking to ACE2 receptors on blood vessels, so this small substance is applicable for COVID-19 infections and damage caused by the spike proteins that the COVID-19 vaccines command the body to make.

Chlorine dioxide is a potent anti-inflammatory. "In addition to speed and broad-spectrum activity, chlorine dioxide is anti-inflammatory by way of oxidizing free radicals and cytokines, chemicals the body releases in response to a wound or infection.[i] Deactivation of these molecules reduces scarring, pain, and irritation."[ii]

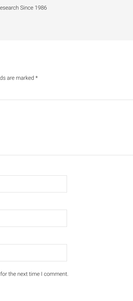
Chlorine Dioxide and Cancer

"I had three hard, very heavy tumors, so big that they almost prevented me from breathing. Then, at night, while sleeping, I had blood that would get into my nose and choke me. After two weeks of chlorine dioxide treatments using CDS [protocols C and D], I felt that the tumors were drying up more and more. Finally, after three months, my tumors were gone. Now I have a new nose. I went to my appointment at the medical office and the secretary, who had seen the pictures of my sick nose, after I removed my mask, screamed, 'It was a miracle, it's a miracle!'"

Chlorine dioxide should be used to treat cancer – or at least some types of cancer – **because of the oxygen it supplies**. Also, as every public-water professional knows, it will kill off all of the viruses, bacteria, and fungi that are often severe problems for cancer patients. Ambulance crews have often regarded oxygen as something approaching a wonder drug. Oxygen has always been a life-saving drug, and now doctors and patients can do much more life-saving because they will be able to give more oxygen quickly and cheaply with chlorine dioxide.

This is what you want to do to cancer tumors. You want to blast them with oxygen. When we send in unending waves of oxygen into cancer cells, just like in warfare, we can carpet bomb them with that oxygen. **Research scientists** from the *Cancer Research U.K.* – the MRC Oxford Institute for Radiation Oncology – have discovered that **oxygen makes cancer cells weak and less resistant to treatment**.

Treating Burns with Chlorine Dioxide



The top-left photograph shows the seriousness of the face burns prior to treatment, while the photo on the right shows the same burns 24 hours after applying MMS (chlorine dioxide) every hour for 18 hours. The other burns on my right hand and lower back took two weeks longer because we could only put MMS on when we cleaned them twice daily every 12 hours. The MMS spray was made with the residuals from making the CDS (100ml of residuals mixed with 8oz of distilled water).

Donovan Hohmann wrote me saying, "I recently had some third-degree burns on 25% of my body. Spent three days in a San Antonio, Texas burn unit. After getting out, my wife and I kept MMS on the burns when we cleaned them twice a day. When we went back for a follow-up checkup, the burn unit was amazed at how fast they had healed. We told them we had a secret solution. They asked if we would share it because they would like to look into it. I told them what the ingredients were. They said, 'I think we use it here.' I said, 'If you do, it's in a small amount, and it had to be in the water you used on me when you cleaned the burns.' They got the bottle and read the ingredients. Sure, enough sodium chlorite and hypochlorite acid and water."

Conclusion

Modern medicine is addicted to using poisons to help people, but their pharmaceutical medicines and vaccines do much more harm than good. It is possible to duplicate the intensity of ICU administration at home through intensive medical baths, transdermal application of medicines, nebulization, suppositories, and oral intake by loading up one's water with powerful natural medicines. Chlorine dioxide is just one example of a list of natural and semi-natural medicines that can be used at home without doctor supervision.

Neither Health Freedom News nor the author are suggesting that any medical care or treatment be conducted without competent medical advice and supervision.

Chlorine Dioxide, the Universal Medicine

Chlorine Dioxide, which is the Cure for Malaria, is among the Oxygen Therapies, Suppressed Because It Works.
The True History Of Human Health is very interesting and for those who Profit From Illness, All Natural Biological Cures are Suppressed. Those with Medical Licenses, who actually tell the Truth, are also Silenced.

Notes:
1. Dr Rudolf Virchow as early as 1855 Proved "The Cells Feed Themselves" as will not use any Poisonous Drugs, or Synthetics as a means of Cure.
2. Dr. William F Koch gave the Cause & Cure of Cancer by 1918 and was Silenced, along with those who supported the Truth.
3. Dr Royal Raymond Rife by 1932 Cured Every Known Disease & by 1935 Cured Every Known & Unknown Diseases with Vibrational Medicine.
4. Harry Hoxsey by 1950 Cured the Worst Cases of Internal & External Cancers. He continued in Mexico, after winning a case against the FDA & AMA, Conspiring Against Him.
5. Dr. Johanna Budwig gave the World Omega Three Oils and How To Cure Cancer with them by 1952
6. Dr Hulda Clark wrote, The Cure For All Diseases by 1994
7. After Ed Macabe wrote, "Oxygen Therapies", he was attacked by the IRS and to show he was not afraid, he wrote, "Flood Your Body With Oxygen".
8. Jim Humble gave the World the Master Mineral Solution, which is actually what this article is about, which has Saved Many Lives, especially with Malaria.
The List is Long, but we should keep in mind what Dr. George W Carey said in his book "The Chemistry Of Human Life", he said:
"We Have the Testimonies of Many Noted Medical Professors & Authors, that their "System of Practice Is Responsible For More Deaths Than WAR, Pestilence & Famines Combined".

As a Private Health Researcher Since 1986, much of what has been found, in the form of Natural Cures and the People who have Cured Every Known & Unknown Diseases by 1935, and up to now, is being uploaded for Humanity in The Digital Library.
